2. Status LED
3. Reset Button
4. Video output for service monitor
5. Network (RJ-45 PoE required)

3. Making Connection

Connect Ethernet cable to make a connection to the PoE HUB.
The camera support PoE only.

4. Assign IP address

The default setting of the camera is set to “DHCP” and “UPnP” function is set to ON. If you have a DHCP server on your network and UPnP function is enabled on your PC you can find the network camera in “My network”.

If a DHCP server is not available on your network, please assign IP address by the following process. Default IP address will be shown as 255.255.255.255.

Execute MultiUpgradeTool.exe. It will search cameras on the network automatically.

- 1) After the camera is listed in camera list, select the camera.
- 2) Type in the all network information.
- 3) Click “Change IP address” button to apply settings to the camera.

When double click the camera in the list, the default web browser (Internet Explorer or compatible equivalent) will open and automatically connect to the camera.

5. Web browser connection

Note : The Network camera supports Internet Explorer 7 or above.
Please check version of your browser and update it if necessary.

When you first access the camera you need to download and install an Active X control from the camera to display a Live image.

Default User and Password are set to “ADMIN” and “1234”.
Please type in the user ID and password to connect the network camera.

For further information for setup, please refer to User’s manual in software CD.
