PRESS RELEASE

CBC for first time at Intertraffic

Dusseldorf – CBC (Europe) GmbH will be represented with a stand (11.628) at the Intertraffic 2014 in Amsterdam

The Intertraffic is a trade fair focusing on products and services related to traffic and transport where many exhibitors introduce/present their range of goods. CBC will make a first time appearance at this trade fair.

The main emphasis will be put on Computar lenses, especially on newly developed lenses with up to 5 MP designed for use in traffic. Furthermore, motor zoom lenses which offer a resolution of up to 3 MP will be presented.

As the importance of thermal cameras has been increasing, suitable lenses will be another highlight.

Additionally, we will introduce our cameras equipped with the GX5-technology which are extremely photosensitive as well as our range of thermal cameras, housings and further interesting products usable in the field of traffic.

CBC (Europe) GmbH belongs to the CBC Group, one of the largest manufacturers of video surveillance system, and can look back on 23 years of successful business in Germany. CBC is an international trading company which was founded in Tokyo, Japan, in 1925 by Mr. Utaro Doi.

Advanced video surveillance products are being continuously planned, developed and produced at our Japanese parent company in Tokyo. Numerous innovations have been successfully launched on the market, especially in the field of lens and camera technology. The lenses we have been producing for 30 years are developed and manufactured in our overseas works.
